Disinfecting during COVID-19

Clean and disinfect your unit

To make your Unit as safe as possible from bacteria and viruses, you need to both clean and disinfect.

- Routine cleaning removes dirt, soil, grease, and other impurities from surfaces
- Disinfecting kills viruses and bacteria

Products to use

Option 1: Use combination cleaner and disinfectant

Option 2: Use general cleaner (soap/detergent and water) and then a disinfectant

Spraying products containing bleach or peroxide may damage/discolour furniture and fabrics and caution should be used. Follow the manufacturer's instructions for all products.

Cleaning tips

- Wear rubber gloves when cleaning and wash hands before and after.
- Use a broom or vacuum to remove dirt and debris from floors and stairs.
- Disinfect floors regularly and clean mop heads after every use.
- Disinfect commonly used fixtures and equipment daily.
- Clean and disinfect other fixtures, furniture and equipment regularly.
